

## DNV Climate Change Academy and Network

DNV calls for proactive competence and skills development to prepare companies for the demands of the developing carbon market. In a strategic response built upon our 10 years experience in the carbon market world wide DNV has created the DNV Climate Change Academy and Network.

The DNV Climate Change Academy and Network (DNV CCAN) shares insights, tools and procedures for developing corporate carbon management strategies and offset projects that we have gathered over the years.

Our courses provide comprehensive solutions to build critical carbon market competence for your organisation. The courses are designed to develop the participants to gain a cutting edge, in-depth and practical qualification across key commercial, regulatory and technological dimensions. Courses can be tailored to fit your specific needs and draw on the depth and breadth of DNV's international experience. DNV combines professional technology and training capabilities to deliver high quality, highly interactive courses for efficient learning. DNV CCAN provides three approaches to learning:

The CCAN Academy objective is to build key carbon competence through climate change training and certification with the goal of supporting company growth and profitability; enabling productivity and innovation; ensuring quality and professionalism; and assisting with attracting and maintaining top talent.

The CCAN Network focus is to develop strategic partnerships with carbon market leaders to build and share knowledge on key strategic and operational issues in the carbon market value chain.

The CCAN Roundtable is an exclusive carbon network with cutting edge insight to enable business strategies and support growth.

The DNV CCAN course portfolio mirrors the current carbon market competence needs offering:

- Carbon Market Fundamentals – 1 day course
- Building Corporate GHG Inventories – 4 day course
- Energy Productivity Management – 3 day course
- Supply Chain Carbon Management – 2 day course
- Developing Carbon Offset Projects – 4 day course
- Monitoring Carbon Offset Projects – 3 day course
- Carbon Portfolio Risk Management – 2 day course
